REMARK

This tube can be used without precautions against microphony in equipment in which $V_i \geq 10$ mV for an output of 50 mW of the output tube (or $V_i \geq 100$ mV for 5W output) provided that the average acceleration of the tube is not greater than indicated in the section "Microphonic effect" of the "Application Directions". When the centre tap of the heater transformer has been earthed, $R_g \leq 0.3$ M Ω and R_k is sufficiently decoupled, the disturbance level for hum and noise will then be better than 60 dB below 100 mV.
